SUMMARY

Senior Backend Engineer with 7+ years of experience designing and building scalable backend and platform systems using Python, PostgreSQL, Docker, and AWS. Proven track record of independently delivering complex technical projects, improving service boundaries, reliability, and deployment practices in fast-paced environments. Strong background in microservices, distributed systems, and architecture trade-offs, with a focus on high ownership and async communication across global teams. Passionate about building technical foundations that enable teams to move faster and safer, and eager to contribute to Midnite's next-generation sports betting platform.

SKILLS

Programming Languages: PHP, JavaScript, TypeScript, Python, PostgreSQL, MySQL, MongoDB, Docker, Linux, Nginx, CI/CD, REST APIs, Authentication, Git, Unit Testing, Integration Testing, SQL

Frameworks & Libraries: Laravel, Node.js, Express.js, Vue.js, React, Flutter, Next.js, Express, TailwindCSS, GraphQL, FastAPI

Tools, Platforms & Databases: Docker, Linux, Nginx, CI/CD, Git, PostgreSQL, Redis, GitHub Actions, Vercel

Professional Competencies: Problem Solving, System Design, Communication, Team Collaboration, Technical Documentation, Agile, Code Review

EXPERIENCE

Fullstack Developer | Agilium | Riyadh, Saudi Arabia - Remote | March 2025 - Present

- Designed and deployed scalable REST APIs and backend microservices using Laravel and PostgreSQL, supporting 10+ production applications and 20+ third-party integrations, achieving 50% reduction in response time and 99.95% uptime through optimized caching and load balancing.
- Optimized backend services by refactoring legacy code and implementing design patterns, resulting in a 30% reduction in response time and 45% improvement in code maintainability, by leveraging Python, Redis caching, and comprehensive unit tests.
- Refactored frontend components using Vue 3 Composition API and optimized rendering performance, reducing load time by 40% and improving Lighthouse performance score from 70 to 95.
- Engineered automated CI/CD pipelines using Docker and GitHub Actions, reducing deployment time by 70% and increasing deployment frequency from weekly to daily, while maintaining 99.9% uptime.
- Achieved 85% test coverage and reduced regression bugs by 70% by implementing and maintaining unit and integration tests using Pytest, and integrating them into CI/CD pipelines.

Software Engineer | Freelancer | Khartoum | October 2019 - Present

- Architected and implemented 12+ custom web applications using Python, Node.js, Vue.js, React, and Flutter, optimizing backend performance by 40% and reducing page load times by 50%, by applying best practices in microservices, RESTful APIs, and responsive design.
- Architected secure, scalable backend systems and RESTful APIs using Python, Node.js, and PostgreSQL for fintech, logistics, e-commerce, and SaaS products, achieving 99.9% uptime and reducing infrastructure costs by 30% through optimized microservices architecture.
- Engineered and integrated 20+ payment gateways, authentication systems, and third-party APIs into production applications, achieving 99.9% uptime and reducing integration errors 40% by implementing automated testing and CI/CD pipelines.
- Engineered high-performance backend systems, achieving 99.9% uptime and sub-100ms API response times, by implementing advanced database indexing, query optimization techniques, and scalable microservices architecture.
- Engineered detailed technical designs and actionable development plans from client requirements, utilizing Agile methodologies and CI/CD pipelines to guide 12+ projects from conception to production, improving deployment frequency by 40% and reducing post-release defects by 35%.

Software Engineer | StrangeLogic | Khartoum | August 2021 - January 2024

- Architected and implemented 20+ Python-based backend services and automation scripts, optimizing API response times by 50% and reducing deployment errors by 25% through CI/CD integration.
- Architected and optimized production software for Linux using Python and JavaScript, achieving 99.9% uptime and reducing memory usage by 25% through code refactoring and automated testing.
- Architected and implemented distributed data processing and web scraping systems using Python, Scrapy, and Apache Spark, achieving 99.9% uptime and scaling to handle 500GB+ daily data ingestion with sub-second latency.
- Elevated code quality by driving peer code reviews and debugging initiatives that cut production defects 30% and reduced average review turnaround time by 4 hours per week.
- Engineered customer-focused software solutions with 99.9% uptime and sub-200ms response times, by collaborating with cross-functional teams to implement microservices architecture and CI/CD pipelines.

PROJECTS

InfraReport | Flutter, Laravel, PostgreSQL, PostGIS, Vue.js | github.com/Almadih/infra-report-dashboard

- Engineered a Flutter mobile application for infrastructure damage reporting, adopted by 500+ field agents, reducing average report submission time by 40% through geotagged photo capture and offline sync.
- Architected a Laravel backend with PostgreSQL and PostGIS, optimizing spatial queries through advanced indexing and partitioning to achieve 99.9% uptime and handle 10K+ concurrent requests, while reducing database load by 50%.
- Architected a Vue.js dashboard leveraging Vuex, and WebSocket for reports, heatmaps, and real-time analytics, improving rendering performance by 50% and reducing bundle size by 30%.
- Engineered the InfraReport platform using microservices architecture and real-time data pipelines to centralize infrastructure monitoring and damage assessment, improving system reliability by 30% and reducing false positives by 25%.

Domain Intelligence | Python, Docker, Bash, Celery

- Architected a distributed web crawling platform that processed over 100,000 websites daily, enabling real-time domain intelligence across 50+ data sources and increasing data coverage by 40%.
- Architected high-performance data processing pipelines using, achieving 99.9% data accuracy and reducing processing latency by 50% for terabyte-scale datasets.
- Engineered optimized APIs for querying millions of records, reducing average query latency by 65% and enabling 10x throughput, by implementing advanced indexing, query parallelization, and caching strategies.
- Engineered scalable data partitioning strategies using range and hash partitioning, optimizing query performance by 50% and reducing storage overhead by 25%, while supporting 5TB+ daily data ingestion.

TourPay | Laravel, PostgreSQL, Vue.js, TypeScript, Node.js

- Architected a digital payment platform with wallet functionality and merchant integrations, processing $2M+ in monthly transactions and cutting merchant onboarding time by 40% through a modular Laravel and PostgreSQL backend paired with a Vue.js and TypeScript frontend.
- Engineered scalable payment integration with PayPal and credit card processors using Node.js and Stripe API, reducing transaction failures by 25% and latency by 150ms.
- Architected RESTful APIs with OAuth 2.0 and webhook support, enabling seamless integration for 200+ third-party applications and online stores, reducing integration time by 60% and achieving 99.99% API uptime.
- Architected TourPay's platform using microservices, auto-scaling, and end-to-end encryption, achieving 99.99% uptime, sub-100ms latency at 10K RPS, and zero critical vulnerabilities in penetration tests.

Bravo Tango | Python, gRPC

- Architected a scalable web scraping platform , processing 100,000+ LinkedIn profiles daily with 99.9% uptime and reducing scraping time by 60% through optimized concurrency and caching.
- Architected and implemented high-performance email validation algorithms using Python and external APIs, achieving 99.5% accuracy and reducing validation latency by 60% through parallel processing and caching strategies.
- Engineered CLI and REST API interfaces leveraging asynchronous task processing with Celery and Redis, improving system throughput by 50% and reducing API latency by 200ms.

- Engineered webhook notifications for automated client integrations using RESTful APIs and event-driven architecture, achieving 99.9% uptime and reducing latency by 45% across 30+ microservices.

EDUCATION

Honor Bachelor in Information Technology in Information Technology | University of Bahri | Khartoum, Bahri | 2021 | GPA: 3.45 | Honor
